

CHEYENNE® Guest Seating

Poly Stack Seating - Arm/Armless

Cheyenne blends traditional high-density stacking capabilities with an ergonomic design, making it the perfect choice for mass seating applications. The hallmark of the line, an innovative back that articulates to provide comfortable, stable support, is made possible by a complex single-piece steel frame that flexes as the back pivots.

Its unsurpassed comfort not only sets Cheyenne apart from other stacking chairs, it allows the seating line to go places no high-density chair has gone before. Armless versions of Cheyenne are ideal for group meeting spaces and auditoriums, but versions with

arms are also available for more expected guest seating venues like cafeterias and reception areas. In multipurpose spaces, reconfigurations are made easy with a transport dolly that securely carries up to 12 cushioned chairs or 25 standard poly chairs.

From conference rooms to classrooms, Cheyenne's options allow you to customize it to suit your needs. Upholstered seats, backs, and armrests create an upscale modern look, while polypropylene seats and backs offer a more traditional stacking chair aesthetic. Even the frames can be customized with chrome or powder-coat finishes.

Ultra-durable polypropylene arm caps are color matched to the seat and back poly. Arm caps can also be upholstered.

Cheyenne's glides snap on and lock in place and help prevent marring on floor surfaces.

Glide options include standard stainless steel, polycarbonate or non-skid rubber to meet the needs of any floor type.

Chrome framed chairs can be aligned in a row with large wire loop gangers. Ganging devices only available in a chrome finish and must be ordered as ganging style with or without standard glides.

CHEYENNE® Guest Seating

The interconnected, articulating seat and back allow the weight of the occupant to dictate the chair's resistance for customized support.

Seat and back pads add style and comfort. Cushions can be upholstered in a variety of fabrics and easily replaced in the field.

Flip-top tablet arms of 12" x 20.5" provide easy access in and out of the chair. For an even larger workspace, an oversized tablet arm is also available in multiple laminate finishes.

A transport dolly easily transports up to 12 arm chairs or 25 armless chairs (70" high) at a time through standard 80" doorways.

Fixed Seat & Back or Tablet Arm Options

While its articulating back may be Cheyenne's most prominent feature, it is not the only detail designed with comfort in mind. The distinctive curvature of the back provides lumbar support, and a waterfall edge on the seat allows unrestricted circulation in user's legs.

Cushioned seat and back pads also enhance the comfort of the passive ergonomics of the chair. These optional pads can be upholstered in a variety of fabrics to coordinate with any décor, and as styles change and fabrics wear, the seat and back

pads can easily be replaced for a fraction of the price of replacing the chair.

Education-gear options make Cheyenne's use in the classroom more than an academic exercise. Two tablet arm options are available. Standard size tablet arms facilitate note taking, while oversized tablets are ideal for laptop use. Cheyenne, a novel approach to the guest seating frontier.
