

NAVIGATOR® AIR TASK SEATING

TASK CHAIR & STOOL

Navigator Air task chairs and stools take comfort to a whole other level by mixing an upholstered cushioned seat with a breathable mesh back.

The contoured frame of the back provides lumbar support, while the open weave of the polyester mesh allows air to circulate more freely for greater thermal comfort.

The Navigator Air seating family does more than incorporate modern materials; it projects a modern aesthetic. Details like the black and grey mesh options and cantilevered

fixed arms reinforce the seating's bold geometry and stark color palette.

As important as how the furniture looks, is how it makes you feel. Navigator task seating ensures you will always be able to find a comfortable seat effortlessly.

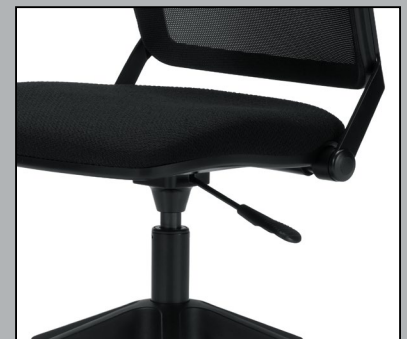

A torsion-bar mechanism gradually increases the resistance as you recline— no tension knob required. The only control below the seat is for the seat height because with Navigator, that is only adjustment you need to make.

The fixed arms of the Navigator Air seating lines are cantilevered, seeming to float right where you need them.

As you recline, the torsion-bar back flex mechanism gradually increases resistance over the entire 12° range.

A pneumatic lift cylinder beneath the seat makes it height adjustable, providing a customized fit.

An adjustable foot ring for the stool provides additional security and stability for users.
