

NAVIGATOR® NESTING GUEST CHAIR

A flip-up seat and integrated handle in the back make the nesting chair perfect for multipurpose spaces.

Engaging the torsion-bar mechanism is as easy as leaning back. No adjustments are required.

Nesting chairs can be specified with a black poly flip-and-fold tablet arm.

Bell glides can be used instead of casters when mobility is not required.

Meeting and conference room seating has unique priorities. It has to look good, be comfortable and always be ready for use. Navigator nesting chairs combine a tubular steel frame with passive ergonomics and a limited set of options to tick all the boxes.

These features make the nesting chair light and maneuverable in multipurpose and classroom environments that have to be reconfigured quickly or on a regular basis.

Flip-up seats, a staggered leg design, and double-wheeled

casters allow the chairs to be stored easily and moved en masse by a single person.

Arm options include a poly loop arm in the frame color or a black poly flip-and-fold tablet arm in addition to the armless guest chair.

A lighter frame doesn't mean that these chairs are light on finish options. Chrome-plated or powder-coated frames in a variety of colors coordinate with upholstered fabric seats and poly or upholstered backs.
